

DSC 270

Data Manipulation

**Note this is NOT CSC
270!!!**

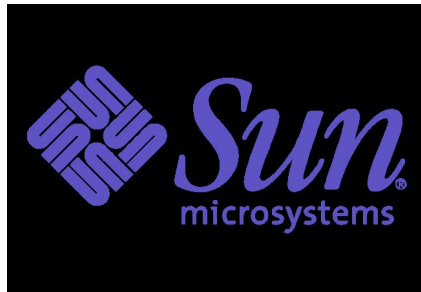

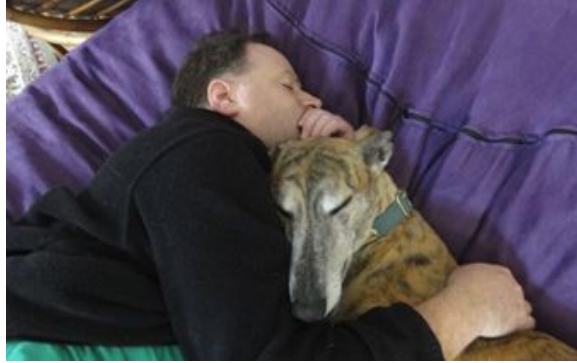

Day 1 Topics

- Motivation for course
- Who am I?
- Who are you?
- Syllabus
- Syllabus quiz
- Python review

Motivation for the Course

- 80% manipulation & cleaning vs 20% analyzing
- Practical skills
 - Excel
 - Databases & SQL
 - Pandas
- Practical approach
 - Learn w/ labs & projects
 - Demonstrate mastery w/ exams
 - Why?
- Caveats
 - Need to program, but not be a developer
 - All starting at different points w/ Excel, so be patient if you know it (enjoy the beginning)

Who Am I?

Who Are You?

- Name (Dave)
- Preferred pronouns (he series)
- Major (Math, CS, Bioinf)
- Year (???)
- Something interesting about you (Blitz)

Syllabus

Syllabus Quiz

Hand out the syllabus quiz!

Python Review

Topics

- Variables
- Conditionals (if/elif/else)
- Loops
- Functions
- File I/O
- Lists and 2D lists

Python Review Lab Goals

Goals:

- Scrape the rust off your programming skills
- Determine what you need to review and/or what deficiencies you need to remedy from CSC 170 to be successful
 - Programming concepts
 - Python syntax

Critical Takeaways:

- You have a couple weeks to get back up to speed and are expected to because we'll be coding a LOT with Python as soon as we finish the Excel module.
- You have minimal Excel homework, so use the extra time to get refreshed on Python
